

## Who Are You?

You're a consultant with a blend of business and technical expertise in information security or data privacy program management. You understand how your skills support the business in which you work and the information your skills protect. You write well and often. You always look for improvement. You have exceptional people skills. Your background in information security standards such as ISO 27001, NIST CSF or CSA:CCM v4 is valuable to us, as is experience with privacy standards and regulations such as GDPR or CCPA.

You'll need to work autonomously in a remote office and adapt quickly and professionally to our customers' expectations. Various arrangements exist regarding travel; all consultants can expect to travel balanced with applicable COVID-19 protocols. Dayspring prefers COVID-19 vaccinated candidates.

## Who Are We?

Dayspring Technology, Inc. is committed to providing valuable, expert consulting services to regulated industry. We provide compliance and process expertise, technology implementation, computer systems validation, and business enablement consulting to our customers. Our advantage is our depth and breadth of knowledge, information security practices, compliance, and our ability to see and improve the processes behind the technology.

Our people are experts at reducing the cost and struggle normally associated with doing business in regulated industries. Our breadth of experience and inability to sit still when we spot inefficiencies translate to time and overhead savings for our customers. We are diligent project managers, efficient business analysts, detail-oriented, creative problem solvers, clever metrologists, and what-if visionaries. Above all, we deliver results.

We are a small organization with a very flexible work environment. We offer retirement benefits after a vetting period.

## What Do We Need?

We're looking for a minimum of 2 years experience working with a corporate information security program. This includes technology solutions and business processes in information security, IT compliance, or privacy.

Skills we're seeking:

- Experience with information security and privacy risk management techniques and various GRC tools or frameworks is essential.
- A background in ISO 27001, NIST CSF, PCI, HIPAA, GDPR, CCPA or data privacy programs is essential.
- Strong project management and self-awareness skills are essential.
- Experience with software security and development life-cycle deliverables (SDLC) is useful.
- Experience working under or implementing controls for ISO 9001, 14001 or 27701 standards is useful.
- Certifications or understanding of ISO 27001, NIST CSF, CISSP, or CISM are more useful.
- Experience with security tools (SIEM, CASB), vulnerability scanning, or security operations monitoring is very interesting.
